Degreed Integration

Last Modified on 06/20/2025 12:14 pm EDT

In this article, you can learn about the Big Think+ / Degreed integration and how to get started.

Integration Overview

Degreed is an [SSO solution](#) combined with FTP. Our standard integration links only to individual videos when users browse or search for content. Once users access Big Think+, they can navigate through the platform.

Partners may build custom pathways within Degreed, leveraging Big Think+ within other pathways. Big Think+ can also send courses and expert classes through the system, which appear to them as their own tiles within Degreed, next to the Big Think+ tile.

Note: An [SSO integration](#) is required for our Degreed integration to function correctly.

Supported Use Case

This integration was developed so users can browse and search for Big Think+ Lessons and seamlessly access the Big Think+ platform. Tracking data securely flows back to Degreed for learning program measurement.

What data is sent?

Big Think+ sends the following information to Degreed:

- User data

- Content data

- Completion percentage

Integration Checklist

1. Partners must have an FTP server containing a directory titled '/inbound'.

2. Big Think+ sends a batch file containing the course catalog.

3. Big Think+ enables the integration with our back-end system.

4. Big Think+ provides the format of the files we're sending.

5. The Integration will automatically begin uploading catalog files that evening to the client, and they will receive completion information in real time. They will receive any updated course information each evening via the sync process.
