

# How do I turn Autoplay On or Off?

Last Modified on 08/07/2025 5:27 pm EDT

*This article explains how you can turn on or off the Autoplay feature for videos on Big Think+.*

Autoplay allows a Video Lesson to automatically continue to the next video in a learning sequence. This can be helpful for hands-free viewing or continuous learning, but you can choose to disable it if you prefer to advance to each Video Lesson manually.

## How can I turn off Autoplay?

You can control this feature directly in the video player.

To turn off Autoplay, look for the **Autoplay toggle** in the bottom-right corner of the video player. Click the toggle button once to turn it off. The toggle will visibly change to indicate that Autoplay is disabled.

Once turned off, Autoplay will remain off for all subsequent Video Lessons across sessions. If you change your mind, you can turn it back on at any time by clicking the toggle button again in any Video Lesson.
