How do I add a question set to a curation?

Last Modified on 11/23/2026 4:26 pm EST

This article explains how to add a question set to a curation.

A question set is a short list of questions that learners answer inside a curation. Only curation owners can add one.

Add a question set

1. Open your curation and click **+ Add Content**.
2. Choose **Question set**. To group it with other items, add a **Section** first.
3. Give it a title and description.
4. Optional: enter the expected time it will take, in whole minutes. If you leave it blank, it adds 0 minutes to the curation's total.

Add questions

1. Click **Add question** and choose a type. You can't change a question's type after you add it.
    - **Multiple choice:** learners pick one option. Each question needs at least two options.
    - **Open-ended:** learners type a response.
2. Click **Save and close** when you're done. Your work saves as you type.

Other things you can do

- **Duplicate** a question set or a question to reuse it, such as for a pre- and post-survey. The copy starts with no responses.
- **Preview** by clicking the question set card on the curation page. Answers you give in preview count as responses.
- **Delete** a question set or question after confirming. Existing responses stay in the download.

Learner experience

Learners can change their answers at any time. A set counts as complete only when every question is answered. Question sets count toward curation completion on platform curations only. They're not included in SCORM downloads or integrations.

Download responses

After learners answer, **Download question set data** appears in the curation's ••• menu and

under Analytics → Curations. You get one CSV with one row per learner, including partial responses.
